Soumya Dwivedi

India | 8169177305 | soumya.dwivedi05@gmail.com | linkedin.com/in/soumya-dwivedi

Technical Skills

Languages/Core: JavaScript, TypeScript, HTML5, CSS3, Python, REST APIs Integration
Frameworks & State: Angular, React.js, Redux, RxJS, Bootstrap, Chart.js, Material UI, PrimeNg
Architecture & Performance: Modular Design Systems (UI Kits), Web Vitals Optimization, Dynamic Rendering, Client-Side Routing Patterns, Memory Management
Tools & Practices: Git, GitHub Copilot, Claude Cowork, Google Antigravity, Webpack, Vite, Docker, Agile/Scrum

Experience

Infosys Limited Navi Mumbai, India
Technology Analyst (Frontend Lead) *Jan 2025 – Present*

- **ICICI Bank Forex Platform:** Architected dynamic rendering patterns across the high-availability banking portal, decoupling hardcoded layout dependencies and boosting modularity.
- Spearheaded cross-functional incident triage for complex intermittent production bugs, directly reducing MTTR and elevating application availability for enterprise clients.
- Partnered with product managers and distributed engineering teams to ship enterprise FX trading features while maintaining strict financial web compliance.

Jio Platforms Limited Navi Mumbai, India
Software Developer (Frontend Team Lead) *Oct 2020 – Dec 2024*

- Built and scaled core admin platforms from scratch (JioWorks, JioCampaigns, JioVMS), delivering responsive interfaces supporting multi-tenant enterprise operations.
- Engineered and published **JET Designs** a unified custom UI library for Angular and React adopted across engineering orgs, accelerating feature delivery velocity by 30%.
- Developed full-lifecycle single-page applications including JioWorks and JioFace 3.0 (Angular) along with JioSwift, JioCampaigns 2.0, and JioNotify (React).
- Architected end-to-end frontend workflows for JioCXConfigService and integrated real-time data pipelines for computer vision suites (JioANPR, JioFace 2.0, JioVMD).
- Implemented advanced performance patterns (Guards, HTTP Interceptors, Route Resolvers, RxJS memory leak prevention) to achieve sub-second client render times.
- Mentored junior frontend developers through workshops on Angular lifecycle architecture, React Hooks, and Chart.js integration.

Education

Birla Institute of Technology & Science (BITS), Pilani Pilani, India
Master of Technology (M.Tech) in Data Science & Engineering *2022 – 2024*

Ramrao Adik Institute of Technology (RAIT), University of Mumbai Navi Mumbai, India
Bachelor of Engineering (B.E.) in Electronics & Telecommunication *2016 – 2020*
Academic Distinction: CGPA 8.6/10.0; Secured 10/10 GP in Applied Mathematics and Core Electronics.

Technical Projects & Research

Real-Time Automatic License Plate Recognition System for Indian Vehicles *BITS Pilani & Jio Platforms*
Technologies: YOLOv8 Nano, PyTorch, Custom OCR, Python, OpenCV

- Collaborated with senior computer vision mentors to benchmark and enhance vehicle plate detection for complex Indian road environments.
- Fine-tuned a lightweight YOLOv8 Nano model on custom edge datasets, attaining 98% detection accuracy on target vehicle streams.
- Developed and evaluated a specialized OCR character recognition module, achieving 95.2% character-level accuracy across diverse plate fonts and formats.

Automated Farm Irrigation & Perimeter Security System *RAIT Mumbai*
Technologies: IoT, Machine Learning, Embedded Python, Sensor Telemetry

- Architected an IoT telemetry system aggregating soil moisture and micro-climate sensor data to drive automated water valve actuation and reduce water usage.
- Implemented real-time motion and intrusion detection using embedded ML algorithms to monitor perimeter security across agricultural fields.
